Bash Shell Scripting

Executing commands on remote server

```
#!/bin/bash
```

Learn how to automate common tasks using bash shell scripting

Executing commands on remote server:

- Two ways (for both password and password less Authentication)
- First way:
    - ssh user_name@remote_server
    - Provide the password if it is password authentication connection.
    - Now run the command and see the result
    - Run exit command to close remote session
    - Note: This is not good for automation
- Second way:
    - ssh user_name@remote_server "command"
    - Provide the password if it is password authentication connection.
    - This is good for automation, if the connection is password less authentication
- Note: ssh -t user_name@remote_server "command"
- ssh -t -o StrictHostKeyChecking=No user_name@remote_server "command"
